ISSUES TO RESOLVE IN REMOVAL ACTION FOR CORNELL-DUBILIER ELECTRONIC SITE **South Plainfield New Jersey**

1. Delineate extent of contamination in both on-site and off-site areas.
2. Sample stream and sediments in Bound Brook.
3. Removal of swales and leaking transformers.
4. Post warning signs and restrict access to contaminated areas.
5. Signs should read,

**WARNING THIS AREA CONTAMINATED WITH
HAZARDOUS WASTE
KEEP OUT
FOR ADDITION INFORMATION CALL:**

6. EPA should have a public relations trailer at the site for the entire removal action.

These specific things should be expedited because this site has every pathway exposure for PCB contamination. The bike and foot path should be closed and the EPA should implement all of these recommendations.
